## EXECUTIVE SUMMARY

This report presents three scenarios of district-wide enrollment forecasts by grade level for the Oregon Trail School District (OTSD) for the 10-year period between 2018-19 and 2027-28. Each enrollment forecast scenario relates to population forecasts that incorporate different assumptions about growth within the District, with the primary differences being the contribution of net migration to the District's population and age distribution. Individual school forecasts consistent with the middle series scenario are also presented for the 10-year period.

## Population Trends

- Between 2000 and 2010, total population within the OTSD grew from 24,104 persons to 28,038: an Average Annual Growth Rate (AAGR) of 1.5 percent. The City of Sandy increased from 5,425 persons to 9,655 , an AAGR or 5.9 percent. During this time Clackamas County overall had an AAGR of 1.1 percent.
- Between 2010 and 2017 the OTSD AAGR was 1.6 percent, slightly higher than the 20002010 decade. The District's population rose to 31,375 in 2017.
- Between 2000 and 2006, OTSD births increased by 41, peaking at 328. They then declined for a few years as the recession and slow recovery took hold. Births resumed their upward trend in 2011, peaking at a new high of 342 in 2015.

## Economic Trends

- Thirty-seven percent of employed OTSD residents work within Clackamas County, with 20 percent working within the area of the school district itself. Forty percent work Multnomah County, with 26 percent and 10 percent commuting to the cities of Portland and Gresham respectively. Ten percent work at various locations within Washington County.
- After three years of recession related job losses Clackamas County added 20,100 jobs between 2010 and 2016, reaching a high of 155,200 jobs.
- After reaching a high of 10.4 percent in 2009, the County's unemployment rate dropped to 4.4 percent in 2016.

## Housing Growth and Characteristics

- Between 2000 and 2007 the City of Sandy averaged 150 Single Family Residence building permits per year. During the next five years (2007-2012) SFR permits dropped precipitously to an annual average of 46 . During the most recent five years the annual average for permits in the City of Sandy improved to about 85.
- Among the three middle school attendance areas, 71 percent of the 383 SFRs built in OTSD between 2013 and 2016 were in Boring. Cedar Ridge MSAA had 23 percent and Welches six percent.
- For undeveloped lots in subdivisions under construction, permitted but not yet under construction, or in the application process, the Boring MSAA has the largest share among OTSD MSAAs, about 73 percent. Additionally, there three apartment projects under land use or plan review in the City of Sandy, totaling 167 units. 143 of these units would be built in the Boring MSAA.

## Enrollment Trends

- OTSD Fall 2017 enrollment was 4,419, with increases each year since 2010-11. The total increase for the 10 year period was 321 students (eight percent).
- For the first five years of the 10 -year historical period OTSD enrollment increased by two percent overall. During the second five years it increased by six percent.

## District-wide Enrollment Forecast: MIDDLE SERIES

- For the first five years of the 2018-19 TO 2027-28 Middle Series forecast, Grades K-5 has the largest increase of the three grade groupings: nine percent (180 students). Grades 68 grows by five percent ( 55 students) and 9-12 by seven percent (104 students).
- During the second five years, grades $6-8$ is the largest gainer ( 15 percent, 158 students). Grades K-5 increases by five percent (98 students) and 9-12 grows by three percent (53 students).
- Total enrollment goes up by 648 students ( 15 percent) over the entire 10 -year forecast period and all three-grade groupings increase in enrollment. The largest gains by single grade are 8 th ( 29 percent) 2 nd ( 28 percent), and $9^{\text {th }}$ ( 24 percent).

## District-wide Enrollment Forecast: LOW SERIES

- District enrollment for the 10 year forecast period increases by 379 students (nine percent).
- Grades 6-8 increase by 14 percent (140 students). Both $\mathrm{K}-5$ and $9-12$ have increases of seven percent (139 and 100 students respectively).

## District-wide Enrollment Forecast: HIGH SERIES

- District enrollment for the 10 year forecast period increases by 924 students (21 percent).
- Grades 6-8 grow by 27 percent ( 275 students). K-5 increases by 21 percent ( 410 students) and grades 9-12 grow by 16 percent (239 students).

## Enrollment Forecasts for Individual Schools

- All OTSD schools gain enrollment over the forecast period, with the exception of Welches MS, which declines by 13 students.

Table 1 summarizes historic and forecast K-12 enrollments by five-year intervals for the Middle series forecast. Table 2 displays historic and forecast enrollment for the Middle, Low and High scenarios. Chart 1 depicts history and the three forecasts graphically.

## INTRODUCTION

The Portland State University Population Research Center (PRC) has prepared long range enrollment forecasts for the Oregon Trail School District (OTSD). PRC's previous enrollment forecasts for OTSD were prepared in February, 2012. This study integrates information about OTSD enrollment trends with local area population, housing, and economic trends, and includes forecasts of district-wide enrollment by grade level and total enrollment for individual schools for the period between 2018-19 and 2027-28. Information sources include the U.S. Census Bureau, birth data from the Oregon Center for Health Statistics, geographic shape files from Clackamas County and Metro, county population forecasts from the Oregon Office of Economic Analysis, employment trends from the Oregon Employment Department, and housing development and planning data from the City of Sandy and Clackamas County.

The District, formed from the 1997 consolidation of the Sandy Union High School District and the Cottrell, Welches, and Sandy Elementary Districts, serves the northeastern portion of Clackamas County, from the community of Boring on the west to Mt. Hood on the east. The only incorporated city within the District is Sandy. The OTSD encompasses 424 square miles. In spite of recent growth in the City of Sandy, 65 percent of the District's residents lived in unincorporated Clackamas County in 2017.

Following this introduction are sections presenting recent population, housing, employment, and enrollment trends within the District. Next are the results of the district-wide enrollment forecasts and individual school forecasts, and a description of the methodologies used to produce the forecasts. The final section contains a brief discussion of the nature and accuracy of forecasts. Appendix A includes the district-wide population and enrollment forecasts for the low and high growth scenarios and Appendix $B$ is a profile comparing the results of the 2000 and 2010 censuses for the District. Appendix C contains a brief District profile based upon two recent American Community Survey data sets.

## POPULATION, EMPLOYMENT, AND HOUSING TRENDS

## Population

Between 2000 and 2010, total population within the OTSD grew by 3,934 persons, from 24,107 to 28,038 . The District's Average Annual Growth Rate (AAGR) of 1.5 percent was greater than Clackamas County's 1.1 percent. Growth in the decade was particularly strong in the City of Sandy, which grew by 4,188 persons ( 77 percent) resulting in a 5.9 percent AAGR. The share of the District's population living within the City of Sandy increased from 22 percent in 2000 to 34 percent in 2010.

During the 2010-2017 period growth in OTSD continued at a slightly higher AAGR of 1.6 percent, resulting in an increase of 3,337 persons. Growth in the City of Sandy declined from its relatively high AAGR during 2000-2010, but was still higher than the District's unincorporated areas, the District overall, and Clackamas County. OTSD's unincorporated areas, which lost 296 persons between 2000 and 2010, rebounded with a population increase of 2,137 between 2010 and 2017.

The 2000, 2010 and 2017 populations of the District, the City of Sandy and Clackamas County are shown in Table 3.

| City and Region Population, 2000, 2010, and 2017 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Clackamas County | 338,391 | 375,992 | 413,000 | 1.1\% | 1.5\% |
| 1. School District population determined by PSU-PRC based on aggregation of census blocks within the OTSD boundary shapefiles. The 2017 estimate is based on an extrapolation of 2010-2016 growth estimated by the Census Bureau. See http://www.census.gov/did/www/saipe. <br> 2. A small part of the City of Sandy's population growth resulted from the annexation of 28 persons between 2000 and 2006. <br> Sources: U.S. Census Bureau, 2000, and 2010 censuses; Portland State University Population Research Center, July 1, 201 estimates |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

## Births and Fertility Rates

Between 2000 and 2016 Births in OTSD followed an upward trend. The lowest point of the period was 2005 with 252 births, and 2015 recorded the highest at 342 . The decline from 2006 through 2010 was likely a response to the recession and slow recovery, and the average of the two most recent years (333) exceeded the pre-recession high of 328. OTSD births appear in Chart 2 and Table 4.

The total fertility rate (TFR) is one measure for fertility; it is an estimate of the number of children that would be born to the average woman during her childbearing years based on agespecific fertility rates observed at a given time. The estimated TFR for OTSD decreased from 2.05 in 2000 to 2.02 in 2010. Comparatively, the TFRs in 2000 were 2.02 for Clackamas County and 1.98 for the State, while in 2010 the they were 1.89 for the County and 1.82 the State.

## Employment

The District is part of the Portland metropolitan area labor market, and most residents commute outside of the District to work, so population growth in the area depends to a great extent on the strength of the metro area's economy. Twenty percent of workers residing within the District also work within it. Altogether, 37 percent of working residents stay within Clackamas County for their employment. Forty percent commute to Multnomah County and 10 percent to Washington County. Twenty-six percent and 10 percent work in the Cities of Portland and Gresham respectively.

| Table 5 <br> Where OTSD Residents Are Employed |  |  |
| :---: | :---: | :---: |

Between 2004 and 2007 Clackamas County added 12,600 jobs, nine percent over the three year period. Growth slowed in early 2008, and in October 2008 the county began to post year-toyear job losses. Between 2007 and 2010 the County lost 13,400 jobs, roughly the nine percent it had gained between 2004 and 2007. After 2010 job growth increased through 2016 by an average of 3,350 jobs per year. The two most recent years, 2015 and 2016, posted the highest annual job gains of the 2004 to 2016 period, 6,300 and 4,900 respectively ${ }^{1}$.

Clackamas County's unemployment rate rose from 4.6 percent in 2007, equal to the U.S. rate, to 10.4 percent in 2009, a little over one percentage point above the U.S. rate. The Portland metro area's unemployment rate increased 5.9 percentage points to 10.9 percent during the period. Between 2009 and 2016, Clackamas County's rate dropped six percentage points to 4.4 percent. Portland Metro's rate in 2016 was 4.7 percent a little higher than the 4.9 percent U.S. rate.

In July 2016, the Oregon Employment Department offered this assessment of Clackamas County future employment growth:

Clackamas County will grow by nearly 24,000 jobs by 2024 according to the latest projections published by the Research Division of the Oregon Employment Department. This translates into a growth rate of 15.0 percent; slightly faster than the state as a whole ( $+13.9 \%$ ) and significantly faster than the nation (6.5\%)...While thousands of jobs will be created over the coming years by economic growth - new or expanding companies - many existing jobs will become open due to replacement needs, predominantly due to retirements. In fact, for every 2 jobs created due to economic growth, 3 existing jobs will become vacant. In total, Clackamas County employers will need to fill 61,000 job openings between 2014 and $2024^{2}$.

## Housing Growth and Characteristics

During the 2000 to 2010 period, the District added about 2,700 housing units, as shown in Table 6. The smaller increase of about 2,000 households (occupied housing units) was due to an increase in vacancy rates, from 18.5 percent in 2000 to 20.3 percent in 2010. The rate may be misleading, because nearly three quarters of the "vacant" units reported in the census are

[^0]designated "for seasonal, recreational, or occasional use" such as the many vacation cabins and condos on Mount Hood. Vacant units designated "for sale or rent" in 2010 were just 3.1 percent of the District's housing units, nearly identical to the 3.2 percent observed in 2000.

The net increase of 322 households with children under 18 during the 20 year period from 1990 to 2010 was small compared with overall gain of 3,367 households. As a result, the share of households with children fell from 41 percent in 1990 to 36 percent in 2000 and 31 percent in 2010. The average number of persons per household also decreased, from 2.77 in 1990 to 2.67 in 2000 and 2.57 in 2010. Factors contributing to the decreases in household size and share of households with children include the rapid growth in the population age 45 and over and declining fertility rates.

Residential building permit activity between 2000 and 2016 within the City of Sandy appears in Chart Three. Between 2000 and 2007, Single Family Residence (SFR) permits averaged about 150 per year. During the next five years (2007-2012) SFR permits dropped precipitously to an
annual average of 46. After reaching a low point of 32 in 2012, SFRs began to rebound, averaging 85 permits annually in the period 2013 through $2017^{3}$.

Between 2000 and 2005, Multiple Family Residence (MFR) permits averaged around 40 units per year. From the beginning of the recession in 2007 through 2017 MFR permits have been spotty, with an average of seven units annually. MFRs in 2017 though, were about twice that average.

[^1]

Table 7 details OTSD SFR construction by Elementary School Attendance Area (ESAA) between 2001 and 2016. Roughly, the numbers reflect the economic cycle. Between 2001 and 2008 there were a total of 1749 units built. The effects of the recession and slow recovery slowed construction declined considerably, with a total of 646 units built between 2009 and 2016. The 2013-2016 period shows an improvement of 120 units over the 2009-2012 period, as construction activity increased in the most recent few years

Among middle school attendance areas during the most recent four year period, 71 percent of SFR construction took place in the Boring MSAA, 23 percent in Cedar Ridge, and six percent in Welches. During this period, the Kelso ESAA had the largest construction share of the five elementary areas at 51 percent.

Overall, about 66 percent of OTSD SFRs have been built within the City of Sandy, and the remaining 34 percent in the unincorporated areas of the District.

Table Eight displays undeveloped lots in subdivisions under construction, permitted but not yet under construction, or in the application approval process. Kelso ESAA has the largest number of lots (89) followed by Naas ESAA (47). The Boring MSAA (Kelso, Naas, and a portion of Sandy) contains 143 of these lots ( 73 percent). Thirteen subdivisions are within the City of Sandy, and five are in unincorporated areas of OTSD.

The City of Sandy has three apartment projects in land use or plan review: Sandy Heights Apartments (138 units), Doug Fir Apartments (24 units) and Cashatt Apartments (5 units). Sandy Heights and Cashatt are within the Boring MSAA portion of Sandy ESAA and Doug Fir is in the Firwood ESAA. Additionally, there are 10 remaining undeveloped units of the 15 unit Trimble PD duplex project located in the Boring MS portion of Sandy ESAA.

## ENROLLMENT TRENDS

Fall 2017 enrollment in all OTSD schools was 4,419. Total enrollment increased each year since 2010-11. Over the entire 2007-08 to 2017-18 historic period enrollment increased by 321 students (eight percent). The largest numeric share in that time was in K-5 (163 students) while the largest percentage share was in grades 6-8 (12 percent).

Growth was slower in the first half of the 10 historical years, with an addition of 89 students (two percent). Growth accelerated in the second half, with an increases of 232 students (six percent).

High school grades recorded the smallest growth among the grade groupings. After a 20 student decrease in the first five historical years, grades 9-12 enrollment grew by 71 in the last 5 years, posting a total growth of 51 (four percent).

OTSD Historic Enrollment, 2007-08 to 2017-18 is displayed in Table 9.

## Enrollment Trends at Individual Schools

Over the most recent five years, OTSD elementary schools as a group grew by a little over 10 percent. Three of the schools increased enrollment, led by Naas and Kelso. Two schools, Firwood and Welches, had small declines. Between 2012-13 and 2016-17 Firwood averaged 463 students per year but fell 30 students below that average in 2017-18. Welches remained close to its average of 208 throughout the period.

OTSD middle schools all had enrollment declines during the period. Incoming $6^{\text {th }}$ grade classes tended to be smaller than the outgoing $8^{\text {th }}$ grade classes, and Oregon Trail Primary Academy expanded into middle school grades during this time. Welches MS accounted for about two thirds of the overall middle school decline, while Boring was nearly level with a drop of two students. Sandy high school increased by 43 students (three percent).

OTSD Historic Enrollment by School 2012-13 to 2017-18 is displayed in Table 10.

## Private and Home School Enrollment and District "Capture Rate"

Private schools within the OTSD enroll local students as well as students from beyond the OTSD boundaries; conversely, OTSD residents attend private schools beyond the District's boundaries, so the number of students enrolled in private schools physically located within the District cannot be used to measure overall private school share. The best source for private school enrollment by residence is census household survey data. The Census Bureau's American Community Survey (ACS) includes questions about school enrollment by level and by type (public or private). The ACS estimate from OTSD households surveyed between 2012 and 2016 indicates that 12 percent (+/-3.7 percent) of OTSD K-12 residents are enrolled in private schools Another difference between OTSD enrollment and child population can be attributed to home schooling. Home schooled students living in the District are required to register with the Clackamas Educational Service District (CESD), though the statistics kept by the CESD are not precise because students who move out of the area are not required to drop their registration. Students who enroll in public schools after having been registered as home schooled are dropped from the home school registry. For the 2016-17 school year there were 217 OTSD residents registered as home-schooled, close to the number in 2011-12. See table 11 for details.

Private schools and home schooling help to explain the difference between the number of school-age children living in the District and the number attending District schools. Both represent "outflow" from the District - that is, children eligible but not attending District schools.

|  |  |  |  |  |

## Inter-District Transfers and Open Enrollment

The other "outflow" consists of District residents who attend public schools in other school districts. There is also a related "inflow" of residents from other districts.

During 2012-13 through 2017-18, OTSD netted a small outflow of 4 students as a result of interdistrict transfers and open enrollment. Grades 9-12 had a total net inflow of 13 students, while K-5 and 6-8 had net outflows of 11 and 6 respectively. The six years were evenly split between net inflow years and net outflow years.

Inter-district transfer and open enrollment data appear in Table 12.

The Oregon Trail Academy has added grades from K-6 in 2012-13 to K-11 in 2017-18. Total out-of-district enrollment has increased from 26 students in 2012-13 to 53 in 2017-18. Average out-of-district enrollment per existing grade per year has increased from 3.71 in 2012-13 to 4.82 in 2017-18.

## ENROLLMENT FORECASTS

## District-wide Long-range Forecast Methodology

To ensure that enrollment forecasts are consistent with the dynamics of likely population growth within the District, we combine a grade progression enrollment model with a demographic cohort-component model used to forecast population for the District by age and sex. The components of population change are births, deaths, and migration. Using age-specific fertility rates, age-sex specific mortality rates, age-sex specific migration rates, estimates of recent net migration levels, and forecasts of future migration levels, each component is applied to the base year population in a manner that simulates the actual dynamics of population change.

The 2000 and 2010 Census results are used as a baseline for the population forecasts. By "surviving" the 2000 population and 2000s births (estimating the population in each age group that would survive to the year 2010) and comparing the "survived" population to the actual 2010 population by age group, we are able to estimate the overall level of net migration between 2000 and 2010 as well as net migration by gender and age cohort. The net migration data were used to develop initial net migration rates, forming a baseline for rates used to forecast net migration for the 2010 to 2030 period.

We estimated the number of births to women residing within the District each year from 2000 to 2016, using data from the Oregon Department of Human Services, Center for Health Statistics. Detailed information including the age of mothers is incorporated in the establishment of age-specific fertility rates (ASFRs) for years 2000 and 2010.

## School Enrollment and Population

School enrollment links to population in two ways. First, the kindergarten and first grade enrollments at the time of the most recent census (the 2009-10 school year) are compared to the population at the appropriate ages counted in the census. The "capture rate," or ratio of enrollment to population, is an estimate of the share of area children enrolled in OTSD schools. Assumptions for capture rates based on census data are used to bring new kindergarten and first grade students into the District.

For purposes of forecasting enrollment, the ratios of kindergarten and first grade public school enrollment to overall population in the corresponding ages are very important. Once a student is enrolled in the public schools in first grade, it is very likely that they will continue to be enrolled in subsequent grades, unless their family moves out of the District. Kindergarten capture rates have recently increased due to the attraction of full day kindergarten. We estimate that about 85 percent of OTSD kindergarten-age residents will enroll in OTSD kindergartens throughout the forecast horizon.

The other way that historic population and enrollment are linked is through migration. Annual changes in school enrollment by cohort closely follow trends in the net migration of children in the District's population. Once the students are in first grade, a set of baseline rates are used to move students from one grade to the next. A grade progression rate (GPR) is the ratio of enrollment in an individual grade to enrollment in the previous grade the previous year. Baseline rates, usually 1.00 for elementary grades, represent a scenario under which there is no change due to migration. Enrollment change beyond the baseline is added (or subtracted, if appropriate) at each grade level depending on the migration levels of the overall population by single year of age.

## Population Forecast

Chart four displays the 2000 to 2010 estimates and 2010 to 2030 forecasts of OTSD population growth attributable to net migration. The 2010 to 2020 decade shows a population decrease attributable to net migration of 300 less persons than the previous decade (2000 to 2010). For the 2020 to 2030 decade, net migration rebounds to a high of 3,100 persons.

Table 10 details history and forecasts for Oregon Trail School District population by age groups. The 2010 population for the OTSD was 28,038, an increase of 3,934 persons from the 2000 Census ( 1.5 percent average annual growth rate, or AAGR). The forecast for 2020 population in the OTSD is 31,249 , an increase of 3,211 persons from the 2010 Census ( 1.1 percent AAGR). The 2030 population forecast is 34,348 , an increase of 3,099 persons from the 2020 Census ( 0.9 percent AAGR).

School-age population (5 to 17) decreased by 54 persons between 2000 and 2010, and its share of total population declined by 3 percentage points. Between 2010 and 2020, school age population is expected to increase by 307, although the total population increase results in school-age share dropping by 0.8 percentage points. Between 2020 and 2030 school-age population is expected to increase by 1 percentage point, ending at 17.3 percent.

## District-wide Enrollment Forecast

Chart 5 compares the historic and forecast number of births in the District with the historic and forecast number of OTSD kindergarten students under the Middle Range scenario. Births correspond to kindergarten cohorts (September to August). Although children move into and out of the District between birth and age five, and not all District residents attend OTSD kindergartens, kindergarten enrollment has remained close to the number of births five years earlier. Because the kindergarten capture rate is assumed to be 85 percent, ratios of kindergarten enrollment to births above 0.85 indicate gains due to positive net migration. Throughout the forecast, net migration between birth and age five contributes to the population of young children within the District.

Table 14 contains detailed Middle Range forecasts for the Oregon Trail School District by grade level annually for the 10 year period. Total K-12 enrollment increases steadily, reaching 5,067 in 2027-28. The District adds 648 students ( 15 percent) for the entire 10 year period between 2017-18 and 2027-28. The largest numeric growth occurs in grades K-5 ( 278 students) and the greatest percentage increase is in grades 6-8 (21 percent).

The first and second halves of the forecast have close-to-equal increases, 339 and 309 students (eight percent and six percent) respectively.

Detailed annual forecasts by grade level for the low and high range scenarios are included in Appendix A.

## Individual School Forecasts

Forecasts for individual schools are consistent with the middle range district-wide growth forecast, under a scenario in which current boundaries and grade configurations remain constant. Of course, school districts typically respond to enrollment change in various ways that might alter the status quo, such as attendance area boundary changes, opening new schools, closing schools, and policy or program changes. If new charter or private schools open, enrollment at District-run schools may be affected. However, the individual school forecasts depict what future enrollments might be under current conditions.

The methodology for the individual school forecasts relies on unique sets of GPRs for each school. New kindergarten classes were forecast each year based on recent trends and birth cohorts within elementary attendance areas. Subsequent grades were forecast using GPRs based initially on recent rates and adjusted based on expected levels of housing growth. The final forecasts for individual schools are controlled to match the district-wide forecasts. Table 15 presents the enrollment forecasts for each school, grouped by school level (elementary, middle, and high).

Elementary schools as a group grows by 277 students over the 10-year forecast period (2017-18 to 2027-28). The five elementary schools all show enrollment increases over the 10 years, ranging from 10 students at Welches ES to 78 at Firwood. Two others, Kelso, and Sandy, are on the high end with Firwood at 77 and 71 respectively. Naas occupies the middle ground at 41 .

OTSD's three middle schools grow by a combined total of 206. The largest increase (158 students) occurs at Boring middle school. A significant share of OTSD's current and future residential construction activity is slated for the Boring MSAA. Cedar Ridge increases by 61 students by 2027-28, a 14 percent increase. Welches declines by 13 students (13 percent).

Sandy high school sees growth of 120 students over the forecast period. Average annual enrollment is 1,473 . The first four years are below that average, followed by six years above the average. The largest annual increase, 50 students, occurs between 2021-22 and 2022-23. The last year of the forecast has an increase of 44 students.

## FORECAST ACCURACY

Forecasts should be understood to represent a range of outcomes even though discrete numbers are provided. Due to the nature of forecasting, there is no way to estimate a confidence interval as one might for data collected from a survey. The best way to measure potential forecast error is to compare actual enrollments with previous forecasts that were conducted using similar data and methodologies.

Table 16 compares actual OTSD enrollment by grade level in Fall 2017 with the 2011-12 forecasts prepared in February 2012, and the 2006-07 forecasts prepared in February 2007. Actual K-12 enrollment was 192 students more than the six year forecast and two students less that the 11 year forecasts. As a measure of average error for individual grade levels, the mean absolute percent error (MAPE) is included in the table. It is 5.8 and 5.7 percent for the six and 11 year forecasts, respectively.

Table 16

## Fall 2017 Enrollment Compared to Previous OTSD Districtwide Forecasts by Grade Level

## 2000 and 2010 Census Profile Oregon Trail School District

| HOUSING UNITS | 2000 |  | 2010 |  | Change |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Total housing units | 11,021 | 100.0\% | 13,695 | 100.0\% | 2,674 | 24.3\% |
| Occupied housing units | 8,980 | 81.5\% | 10,913 | 79.7\% | 1,933 | 21.5\% |
| Owner occupied ${ }^{5}$ | 7,146 | 79.6\% | 8,256 | 75.7\% | 1,110 | 15.5\% |
| Owned with a mortgage or a loan | N/A |  | 6,111 | 74.0\% |  |  |
| Owned free and clear | N/A |  | 2,145 | 26.0\% |  |  |
| Renter occupied | 1,834 | 20.4\% | 2,657 | 24.3\% | 823 | 44.9\% |
| Vacant housing units ${ }^{6}$ | 2,041 | 18.5\% | 2,782 | 20.3\% | 741 | 36.3\% |
| For rent | 154 | 7.5\% | 180 | 6.5\% | 26 | 16.9\% |
| For sale only | 203 | 9.9\% | 246 | 8.8\% | 43 | 21.2\% |
| Rented or sold, not occupied | 73 | 3.6\% | 59 | 2.1\% | -14 | -19.2\% |
| For seasonal, recreational, or occasional use | 1,483 | 72.7\% | 2,048 | 73.6\% | 565 | 38.1\% |
| For migrant workers | 7 | 0.3\% | 16 | 0.6\% | 9 | 128.6\% |
| All other vacants | 121 | 5.9\% | 233 | 8.4\% | 112 | 92.6\% |
|  |  |  |  |  |  |  |
| Owner-occupied housing units | 7,146 | 79.6\% | 8,256 | 75.7\% | 1,110 | 15.5\% |
| Population in owner-occupied housing units | 19,3 |  | 21,2 |  | 1,942 | 10.0\% |
| Average household size of owner-occupied units | 2.7 |  | 2.5 |  | -0.13 | -4.8\% |
| Renter-occupied housing units | 1,834 | 20.4\% | 2,657 | 24.3\% | 823 | 44.9\% |
| Population in renter-occupied housing units | 4,635 |  | 6,718 |  | 2,083 | 44.9\% |
| Average household size of renter-occupied units | 2.5 |  | 2.5 |  | 0.00 | 0.0\% |

1. Land area of the census blocks that approximate the area. The same boundaries were used for both 2000 and 2010; any differences in land area between 2000 and 2010 reflect changes to census block geography.
2. In combination with one or more of the other races listed. The six numbers may add to more than the total population, and the six percentages may add to more than 100 percent because individuals may report more than one race.
3. "Spouse" represents spouse of the householder. It does not reflect all spouses in a household. Responses of "same-sex spouse" were edited during processing to "unmarried partner."
4. "Family households" consist of a householder and one or more other people related to the householder by birth, marriage, or adoption. They do not include same-sex married couples even if the marriage was performed in a state issuing marriage certificates for same-sex couples unless there is at least one additional person related to the householder by birth or adoption. Same-sex couple households with no relatives of the householder present are tabulated in nonfamily households. "Nonfamily households" consist of people living alone and households which do not have any members related to the householder.
5. Percentage distribution of ownership categories ("owned with a mortgage or a loan" and "owned free and clear") adds to 100 percent.
6. Percentage distribution of vacancy categories ("for rent," etc.) adds to 100 percent.

* Green, yellow, and red icons indicate the reliabilty of each estimate using the coefficient of variation (CV). The lower the CV, the more reliable the data. High reliability ( $C V<15 \%$ ) is shown in green, medium reliability (CV between 15-30\% - be careful) is shown in yellow, and low reliability (CV $>30 \%$ - use with extreme caution) is shown in red. However, there are no absolute rules for acceptable thresholds of reliability. Users should consider the margin of error and the need for precision.
** Indicates that the two estimates are statistically different at the 90 percent confidence level based on results of z-test taking into account the difference between the two estimates as well as an approximation of the standard errors of both estimates.
